WORK EXPERIENCE

Product Designer at Infoblox

2017 - Present

I worked on full-redesign of four major security products at Infoblox: Dossier, TIDE (Threat Intelligence Data Exchange), Cloud Data Connector, ATC (Active Trust Cloud).

I designed several components that work across the whole suite of Infoblox's security products: Reporting Engine, Task based workflows.

Engaged with customers and Product Managers to figure out requirements and draft user stories. Worked with cross functional teams of PMs, Engineers, Sales and Marketing to build design solutions.

Created user flows, interaction patterns, design docs, wireframes/mockups, and prototypes based on user stories.

Helped mentor and onboard a full-time designer and an intern.

Scenario Designer at Google's Self Driving Car Project

2015 -2016

Designed test scenarios for the self-driving car and worked with the engineering team to improve the user experience of Google's internal tools like Carcraft. Mentored two new hires.

EDUCATION

Massachusetts Institute of Technology

2017

Certification in Human-Computer Interaction for User Experience Design

Panjab University, India

2014

MBA in Marketing and Finance
2nd in class of 140

Punjab Technical University, India

2012

Bachelors Degree in Computer Science
3rd in class of 140
